Drawings

1. The drawings were received on 13 November 2008. These drawings are acceptable.

Allowable Subject Matter

2. Claims 11-25 are allowed.
3. The following is an examiner's statement of reasons for allowance: Applicant's arguments filed 13 November 2007, regarding Kim (Kr2001093359 A), on Page 9, second paragraph, have been fully considered and are persuasive.
4. The claimed invention requires a fuel cell with an electrolytic membrane, which has a concentration gradient of the protons within a thickness of the membrane to allow the concentrated water to evacuate from a single electrode outlet. The closest prior art of record are Rusch (WO97/41168) and Wilkinson (US 5,366,818). Rusch teaches the absorption of water in a membrane. Wilkinson teaches the removal of water from the anode by dead ending the cathode side. There is no motivation to combine the references because by dead ending the cathode, the water is removed from the anode side. Therefore it would not be necessary to replace the membrane in Wilkinson with that of Rusch. Rusch does not disclose, teach or suggest using the membrane to concentrate water at an electrode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
